Foreword xxv

SECTION I: CANCER PREVENTION

Cancer and the Epidemiologist

1. Cancer and Tobacco: Its Effects on Individuals and Populations 1
Bernard W. Stewart, Patricia F. Cotter and James F. Bishop
2. Reviewing the Evidence on the Effectiveness of Smoking Cessation Interventions 33
Nicholas Zwar
3. Diet, Physical Activity and Cancer — The Epidemiological Evidence 49
Erica L. James, Victoria M. Flood, Bruce Armstrong and Fiona Stacey
4. Sun Exposure, Vitamin D and Cancer 79
Bruce Armstrong and Anne Krickler

5.	Oral Contraceptives, Hormone Replacement Therapy, and Cancers of the Female Reproductive System	111
	<i>Karen Canfell and Emily Banks</i>	

6.	Involuntary Exposures — Can Knowledge Keep Pace with Perceptions?	131
	<i>Bernard W. Stewart</i>	

SECTION II: INTERDISCIPLINARY MANAGEMENT ISSUES IN CANCER TREATMENT

Ila: Beyond Cancer Treatment

7.	Diagnostic Dilemmas During and After Chemotherapy Treatment	161
	<i>Ian N. Olver</i>	

8.	Acute and Late Radiation Therapy Effects	179
	<i>Sandro V. Porceddu, Jarad M. Martin, Brian O'Sullivan and Michael Fay</i>	

9.	Oncological Emergencies: Diagnosis and Management	201
	<i>Desmond Yip and Nicole Gorddard</i>	

10.	Managing Cancer in Pregnancy	231
	<i>Belinda E. Kiely and Kelly-Anne Phillips</i>	

11.	Addressing the Nutritional Needs of Patients Undergoing Cancer Treatment — A Dietitian's View	267
	<i>Judy Bauer, Jane Read and Kathy Chapman</i>	

12.	Beyond Conventional Cancer Treatments: The Use of Complementary Therapies During Cancer Treatment: Implications for Clinicians	285
	<i>Stephen J. Clarke, Andrew J. McLachlan, Darrin Brown, Stephen Carbonara and Rachel Kissane</i>	

13. What Matters to Patients and Carers 317
Kendra J. Sundquist and Monica C. Robotin

IIb: Cancer and the Surgeon

14. Neurosurgical Involvement with Cancer Patients 343
Mark A. J. Dexter and Juyong Cheong
15. Cancer and the Thoracic Surgeon 367
Edmund Kassis and Stephen C. Yang
16. Cancer and the Oesophageal Surgeon 395
Urs Zingg, Reginald V. Lord and David I. Watson
17. Abdominal Emergencies in Cancer Patients: 421
Diagnosis and Management
Brian Badgwell and Barry Feig
18. Peri-operative Management of Patients with GI 439
Malignancy: The Interdisciplinary Approach
Ross C. Smith
19. Management Challenges Following Rectal 465
Cancer Treatment
Margaret Schnitzler
20. Management of Nutritional Issues After Major 487
Pancreatic Resections
Nam Q. Nguyen, Neil D. Merrett and Andrew V. Biankin
21. Management Decisions in Primary and Secondary 507
Liver Cancer
Mark E. Brooke-Smith and Robert T. A. Padbury
22. Cancer and the Gynaecological Oncologist 547
D. E. Marsden
23. Orthopedic Emergencies in Oncology 569
Valerae O. Lewis and Jeffrey T. Luna

24.	Recognition, Treatment and Management of Post-cancer Treatment Lymphoedema <i>Neil Piller</i>	603
25.	Diagnostic and Management Challenges Following Radical Prostatectomy <i>Manish I. Patel</i>	627
26.	Plastic and Reconstructive Surgery in Oncological Surgery <i>Sean Nicklin and Mohammad Rahnavardi</i>	647
27.	Cancer and the ENT Surgeon <i>Timothy P. Makeham, Julia Crawford, Mark Smith, Meville Da Cruz and Carsten E. Palme</i>	673
IIc: Cancer and the Physician		
28.	Thyroid Cancer and the Endocrinologist <i>Nirusha Arnold and Howard C. Smith</i>	703
29.	The Effects of Cancer Therapy on Gonadal Function and Fertility <i>Howard C. Smith</i>	729
30.	Cancer and Thrombosis <i>Jerry Koutts</i>	753
31.	Haematological Abnormalities in Cancer Patients <i>Philip J. Crispin and Ian W. Prosser</i>	783
32.	Managing the Patient with Chronic Viral Hepatitis Receiving Chemotherapy <i>Venessa Pattullo and Jacob George</i>	813
33.	Management of Malignant Gastrointestinal Tract Obstruction <i>Eric Y. T. Lee, Vu Kwan and Michael J. Bourke</i>	833

34.	Cancer and the Heart: The Good, the Bad and the Ugly <i>Liza Thomas and David Richards</i>	859
35.	No-Man's Land: Between Paediatric and Adult Medical Oncology <i>Lisa M. Orme, Susan Palmer and David Thomas</i>	885
36.	Cancer and the Geriatrician — Managing Cancer in Older People <i>Robert J. Prowse</i>	907
37.	Cancer and the General Practitioner. The Role of the GP in Cancer Diagnosis and Treatment <i>Moyez Jiwa</i>	917
IId: Cancer and the Geneticist		
38.	Genetic Testing for Cancer Susceptibility: How and When? <i>Judy Kirk</i>	931
39.	Management of Women at High Familial Risk of Breast and Ovarian Cancer <i>Kathryn M. Field and Kelly-Anne Phillips</i>	941
40.	Management of High Genetic Risk Bowel Cancer <i>Barbara Leggett</i>	969
41.	Hereditary Mutations and Cancer Management <i>Alison H. Trainer and Robyn Ward</i>	981
SECTION III: SURVIVING CANCER		
IIIa: Survivorship Issues		
42.	Cancer and the Psycho-Oncologist. Psychosocial Well-Being of Cancer Survivors <i>Jane Turner, Katharine Hodgkinson and Allison Boyes</i>	1005

43.	Understanding and Managing Changes in Survivor Identity and Relationships <i>Paul Y. Cheung and Ian H. Kerridge</i>	1023
44.	Survivors of Childhood Cancer: Issues and Challenges <i>Carmen L. Wilson, Richard J. Cohn and Lesley J. Ashton</i>	1047
45.	The Benefits of Nutrition and Physical Activity for Cancer Survivors <i>Kathy Chapman, Erica L. James, Jane Read and Judy Bauer</i>	1077
IIIb: Cancer, Palliative Care and End of Life Issues		
46.	Palliative and Supportive Care <i>Geoffrey Mitchell and David C. Currow</i>	1099
47.	Cancer Care and General Practice Palliative Care <i>Paul Mercer</i>	1121
48.	Spiritual and Existential Issues at the End of Life <i>Bruce Rumbold</i>	1139
	<i>Index</i>	1161

Foreword

Oncology: Beyond the Oncologist

Oncology is an increasingly complex field with constant improvements in surgery, radiation energy and computer-based treatment planning, and emerging molecular therapeutics. Furthermore, advances in diagnostic and functional imaging, molecular genetics and pathology, and minimally invasive procedures performed by an array of surgical and non-surgical specialists, have led to more robust and refined interdisciplinary cancer care. Just as importantly, improved adjunctive therapies and supportive measures during and after cancer treatment now mandate greater involvement of non-oncology specialists. In this century, no single oncologist can manage all patient needs through the spectrum of prevention, diagnosis, treatment, supportive care, and survivorship.

This reference is of great value to all practitioners who care for patients in need of cancer prevention, screening, therapy, and survivorship care. In addition to the perspectives provided by expert oncologists, a large component of the book illustrates the important contributions of non-oncology consultants in optimizing survival and enhancing quality of life. The text is therefore partitioned into appropriate sections so the reader can quickly find practical advice for particular oncologic problems and comorbidities frequently encountered in these patients.

Required Reading

In addition to the specific subspecialty topics covered in this book, there are several important chapters which cut across all disciplines: *Cancer and the Epidemiologist*, *Cancer and the Geneticist*, *Cancer and Complementary Medicine*, *Cancer and the Psycho-Oncologist*, and *Cancer and the Palliative Care Specialist* provide important information for all caregivers and reading them is encouraged. *Cancer and the Epidemiologist* reviews our current knowledge about smoking, smoking cessation, and cancer, diet and cancer risk, and emerging data about vitamin D and hormone replacement in cancer risk and prevention. These topics are among the most frequently raised by patients and loved ones before and after a cancer diagnosis.

Second, *Cancer and the Geneticist* provides a snapshot of current evidence about genetic mutations which increase the risk of certain cancers. Moreover, this chapter gives us a window into the future of personalized cancer care: genetic testing to identify those who may harbor a mutation, which will increasingly require specific screening efforts and interventions (medical and surgical) to minimize cancer risk. It also suggests what is coming: therapy specifically designed for a given genetic mutation as the concept of synthetic lethality becomes more broadly appreciated. These strategies will certainly be a larger part of oncology in the 21st century and beyond. Third, while not necessarily embraced by all clinicians, *Cancer and Complementary Medicine* is a “must read”. Having either a dismissive or uninformed attitude about complementary or integrative medicine will not serve our patients well and obtaining a working knowledge of the principles and evidence-basis for this discipline is strongly recommended.

Cancer and the Psycho-Oncologist and *Cancer and the Palliative Care Physician* are also essential reading. The physical and psychosocial problems facing cancer patients and survivors can be daunting, and often not fully appreciated by treating physicians. Sensitivity to these tribulations is inherent to high-quality care and it is the duty of all physicians to minimize suffering. Acknowledgement and management of pain, grief, and loss and open discussions at the end of life are responsibilities that must be shared, not delegated, and doing so helps our patients and ourselves.

Cancer Care in the 21st Century: The Information Age Meets Team Oncology

Most importantly, as our understanding of the molecular basis of neoplasia accelerates and our appreciation for the total care needs of our cancer patients grows, modern cancer care must be transformed. The boom in information technology has facilitated much of the revolution in oncology and must also be part of the solution to deliver sophisticated, high-quality, interdisciplinary care in small community centers and larger academic ones. How this is accomplished, who is involved, and what professional attributes are necessary to deliver this care cannot be answered directly by this reference. However, as you read it, reflect on the environment in which you practice and how to best interact with a dynamic team of specialists, all of whom play an essential role in patient care. In larger centers, this may take the form of multidisciplinary, disease-specific clinics staffed by surgeons, medical oncologists, and radiotherapists, with ready access to experts in pathology, radiology, gastroenterology, pulmonary medicine, or supportive care. In other centers, regularly held multidisciplinary cancer conferences, which bring a number of subspecialists together in case-presentation format may be required, as a practical substitute for a multidisciplinary clinic. In many clinical settings, communications might have to be carried out electronically through secure web-based information systems and electronic mail. This is increasingly feasible as electronic medical records, web-based digital radiology files, and soon, digital photomicrographs, become widely available across the world; these innovations must be embraced and utilized by all.

Lastly, how physicians interact with each other and with patients in this new century will be a critical component of quality care and scrutinized by professional societies in the years to come. Interpersonal and communication skills are not just buzz words: consensus-building and consistent communication of information to patients is vital to the effectiveness of increasingly complex care plans. In this regard, physicians must assume different roles at various times during a course of treatment and longitudinal care: either as team leader, or team player. These roles may change at transition points of care, and as the team lead shifts, a clear

understanding of who is in charge should always be conveyed to the patient.

In summary, this text is an exciting and refreshing edition which reflects the emergence of “team oncology”. I hope it broadens and deepens your perspective on the future of oncology care and causes you to reflect on how your practice habits should change in this dynamic era.
