Contents

List of Tables	ix
List of Figures	xi
 Chapter 1. What Do We Mean by Change?	 3
The Study of Change	8
 Chapter 2. Some Definitions	 11
Natural Systems	11
Artificial Systems	11
Social Systems	12
Technical Systems	12
Socio-Technical Systems	12
A System	13
Complicated System	13
Complex System	14
A Component's Environment	15
Co-Evolutionary Systems	16
Thresholds	17
Propagation	17
Initial Conditions	18
Design Space	18

Chapter 3. Failure by Design	21
Socio-Technical Design Failure	21
Chapter 4. Influence, Boundaries and Structure	27
Examples	27
Influence	29
Boundaries	31
Organisation or Network Structure	33
Regular Networks	33
Random Networks	34
Small-World Networks	34
Layered and Hierarchic Aspects	36
Systems have a Past and a Future	37
Layers of Change	37
Chapter 5. Change in Complex Systems	41
Fitness and Change	43
Change in an N-dimensional Design Space	47
The Co-Evolutionary Process	50
The Threshold	52
Resistance to Change	55
Chapter 6. Propagation	59
The Temporal Effect	60
An Illustration of Propagation in a Model	61
Chapter 7. Modelling and Modelling Mechanisms	67
Models	67
Computer-Based Models	68
Aspects of Model Design	70
Coupling	72
Cumulative Effect	76
Structural Change	77

Mechanisms	77
Cellular Automata	77
Simultaneous Change	82
Subsequent Changes	85
Feedback	88
Agent-Based Models	89
Chapter 8. Simulation	93
The SeeChange Program and the System Structure	96
A “Cellular Automata” Application of SeeChange	100
Small-World Application of SeeChange	103
Applying SeeChange to a Business Model	108
Comparison of SeeChange with Commercial Tools	112
Insight and Understanding of System Behaviour	114
Insight into Interaction with Complex Systems	114
Chapter 9. What Do We Do When a Change is Indicated?	117
Messes, Problems and Puzzles	117
Design by Increments	118
Forecasting	120
Chapter 10. Implementing a System	121
Early Architectures	121
Mutability	124
The Crucial Role of Time	125
Design of Computer-Based Systems	126
Design Strategy	127
Chapter 11. Real-World Change: EUREKA Class	129
Aspects of the Change Process on a Ship	130
EUREKA Simple Simulation	131
Independent Changes	132
Impact Analysis	132
A Model of Change on a EUREKA Ship	137

A SeeChange Model of Changes to a Ship	145
Physical Model	145
Structure of the SeeChange Model System	151
Chapter 12. Real-World Change: Climate	165
Climate Variables	165
Climate Data	171
Climate Models	174
Simulation of Climate Models	176
Chapter 13. In the Future	181
Surprise is Always the Result of Change, Accept It	181
Bibliography	183
Index	191

List of Tables

Table	Title	Page
1.	Regular, semi-regular and chaotic change	87
2.	Attributes of added link systems over 2,000 time-steps	107

This page intentionally left blank

List of Figures

Figure	Title	Page
1.	A component in its environment	7
2.	Change propagating through a two-component system	18
3.	A design space for a chair	19
4.	A particular point in the design space for a chair	19
5.	Tree of options and results	30
6.	A directed graph	30
7.	Graduated influence	32
8.	Pervasive influence	32
9.	Multiple influences of different strengths	33
10.	A regular and a random network	34
11.	A small-world network	35
12.	Thought experiment apparatus	39
13.	Thought experiment	39
14.	A two-dimensional design space	44
15.	A two-dimensional design space in its environment	45
16.	Fitness magnitude at different points on the design space	45
17.	Fitness landscape	46
18.	Deformation of a fitness landscape as linked fitness landscape changes	46

19.	An example of a fitness landscape	47
20.	A design space of 16 dimensions indicating the magnitude of each of the given component's dimensions on a scale of 0 to 10	49
21.	Two loci describing two different designs in the same design space	49
22.	Mapping the design onto the fitness landscape	50
23.	A design point moving in design space and on the fitness landscape	50
24.	The fitness algorithm of each component takes into account the influence of its environment	51
25.	A structural model of the system in Figure 24	52
26.	Diagram of the change process	53
27.	Schematic of the change process	54
28.	The change rule operating inside the component	55
29.	Two-dimensional resistance landscape	56
30.	Asymmetric resistance	56
31.	Extremely low asymmetric resistance	57
32.	Resistance diagrams of components interacting within a system	57
33.	First stages of propagation	60
34.	Next stages of propagation	60
35.	A system whose components have a single attribute and two environmental influences	61
36.	The same system rearranged	62
37.	A cellular automaton's change rule	63
38.	The eight possible permutations of the three states	63
39.	The graphic rule set for the target cell	64
40.	A cellular automata at time t_0	64
41.	A cellular automata at time t_1	65
42.	Successive rows of system states; the borders of the white or 0 cells are not showing	65
43.	A system of systems	71
44.	Intra-component coupling	74
45.	Strands of coupling	76

46.	A state/time diagram of a one-dimensional, two-state cellular automata, one horizontal line per time-step	78
47.	The Game of Life. A state/time diagram of a two-dimensional, two-state cellular automata running from time T_0 to T_2 , one lattice per time-step	79
48.	Shell patterning and cellular automata state/time diagram	81
49.	The one-dimensional CA program showing the evolution of the WN 151 rule set	83
50.	Time-step T_1	83
51.	Two changes 25 cells apart, shown after 3 time-steps	84
52.	Interference in cellular automata	84
53.	Second change introduced on the third time-step	85
54.	Example of chaotic behaviour induced by a change later in time	86
55.	Change inside and outside the current propagating changes	87
56.	System with a variety of links	88
57.	SeeChange — a system showing the influence the market players have on each other	95
58.	State/time diagram showing the change over time of each of the dimensions	97
59.	SeeChange details windows	98
60.	SeeChange screenshot 1	99
61.	SeeChange screenshot 2	99
62.	SeeChange screenshot 3	100
63.	Extending the number of influences	101
64.	SeeChange cellular automata simulation	101
65.	SeeChange screenshot showing the cellular automata simulation	102
66.	Movement from a cellular automata model towards a small-world model	104
67.	Time-step by time-step representation of the system state	105
68.	Binary representation of the system state	105
69.	Graph of system states	105

70.	Graphs of cyclic system states	106
71.	Graphs of chaotic system states	106
72.	Time-step representation and graph of system states	107
73.	A business system simulation	108
74.	Changes in the business system dimensions over time	111
75.	Simplistic view of a computer-based system	122
76.	A more practical view of a computer-based system	123
77.	A more complete view of a computer-based system	124
78.	Proposed changes at a given instant in time	130
79.	EUREKA ship — simplified design space	131
80.	EUREKA ship — simple model	132
81.	Independent change A	133
82.	Independent change B	134
83.	Concurrent change	134
84.	Knowledge management schematic	135
85.	Impact analysis chart	136
86.	Relationship of centre of gravity and centre of buoyancy	146
87.	Relationship of turning moments due to the gun and to buoyancy	147
88.	A simplified physical model of a ship	148
89.	SeeChange model with the ship components and the initial influence connections	152
90.	The four layers in the system	153
91.	SeeChange model with the Radar installed	154
92.	SeeChange model with the Deckgun and Ammunition installed	156
93.	System after the Auxiliary Generator was installed	158
94.	Graphical results from ship system shown over 12 time-steps	159
95.	Stakeholders in the wider system	160
96.	Strengths of influence connections	161
97.	Resistance maps of the stakeholders	162
98.	Eccentricity of the Earth's orbit	166

99.	Tilt of the Earth's rotational axis	167
100.	Precession of the Earth's rotational axis	168
101.	Interaction of the basic variables	172
102.	A descriptive model of some of the variables involved in the Earth's climate	175
103.	The atmosphere and oceans are divided into a multi-layered grid	177
104.	A cell with its six neighbours in three dimensions	178

“All things change, nothing is extinguished...
There is nothing in the whole world which is
permanent. Everything flows onward; all things are
brought into being with a changing nature; the ages
themselves glide by in constant movement.”

Ovid (43 B.C.–17 A.D.), *Metamorphoses*, Book 15
