BIOMECHANICS AT MICRO- AND NANOSCALE LEVELS

VOLUME IV

Biomechanics at Micro- and Nanoscale Levels

Editor-in-Charge: Hiroshi Wada
(Tohoku University, Sendai, Japan)

Published

Vol. I: Biomechanics at Micro- and Nanoscale Levels

Edited by Hiroshi Wada

ISBN 981-256-098-X

Vol. II: Biomechanics at Micro- and Nanoscale Levels

Edited by Hiroshi Wada

ISBN 981-256-746-1

Vol. III: Biomechanics at Micro- and Nanoscale Levels

Edited by Hiroshi Wada

ISBN-13 978-981-270-814-4

ISBN-10 981-270-814-6

PREFACE

A project on “Biomechanics at Micro- and Nanoscale Levels,” the title of this book, was approved by the Ministry of Education, Culture, Sports, Science and Technology of Japan in 2003. This four-year-project, carried out by fourteen prominent Japanese researchers, finished in March 2007. The project consisted of four fields of research, which are equivalent to the four chapters of this book, namely, Cell Mechanics, Cell Response to Mechanical Stimulation, Tissue Engineering, and Computational Biomechanics.

Our project can be summarized as follows. The essential diversity of phenomena in living organisms is controlled not by genes but rather by the interaction between the micro- or nanoscale structures in cells and the genetic code, the dynamic interaction between them being especially important. Therefore, if the relationship between the dynamic environment of cells and tissues and their function can be elucidated, it is highly possible to find a method by which the structure and function of such cells and tissues can be regulated. The first goal of this research was to understand dynamic phenomena at cellular and biopolymer-organelle levels on the basis of mechanics. An attempt was then made to apply this understanding to the development of procedures for designing and producing artificial materials and technology for producing or regenerating the structure and function of living organisms.

Volumes I, II and III of a series of books related to this project have already been published, the present volume being the last in this series. The results obtained by individual researchers participating in this project are summarized in this volume.

Hiroshi Wada, PhD,
Project Leader,

CONTENTS

PREFACE	v
I. CELL MECHANICS	1
Structural analysis of the motor protein prestin <i>H. Wada, K. Iida, M. Murakoshi, S. Kumano, K. Tsumoto, K. Ikeda, I. Kumagai and T. Kobayashi</i>	3
Effects of cytoskeletal structures on elastic and viscoelastic properties of cells in soft tissues <i>T. Matsumoto, K. Nagayama, H. Miyazaki and Y. Ujihara</i>	14
Biomechanical properties of collagen gel associated with microvessel formation in vitro <i>K. Tanishita, N. Yamamura, R. Sudo and M. Ikeda</i>	25
Depth-dependent compressive behaviors of articular cartilage and chondrocytes <i>T. Murakami, N. Sakai, Y. Sawae, M. Okamoto, I. Ishikawa, N. Hosoda and E. Suzuki</i>	36
II. CELL RESPONSE TO MECHANICAL STIMULATION	47
Cytoskeletal reassembling and calcium signaling responses to mechanical perturbation in osteoblastic cells <i>T. Adachi, K. Sato, M. Hojo and Y. Tomita</i>	49
Experimental estimation of preexisting tension in single actin stress fiber of vascular cells <i>S. Deguchi, T. Ohashi and M. Sato</i>	60
Biophysical mechanisms of tension-dependent formation of stress fibers from actin meshwork <i>H. Hirata, H. Tatsumi and M. Sokabe</i>	72

III. TISSUE ENGINEERING	83
Effects of cyclic hydrostatic pressure loading on regulation of chondrocyte phenotypes <i>A. Oura, M. Kawanishi, K. S. Furukawa and T. Ushida</i>	85
Effects of a shear flow and water filtration on the cell layer of a hybrid vascular graft <i>X. He and T. Karino</i>	96
Tissue reconstructions for motor organs with mechanically structured grafts <i>K. Takakuda</i>	107
IV. COMPUTATIONAL BIOMECHANICS	117
Microscopic analysis of bone <i>M. Tanaka, T. Matsumoto and M. Todoh</i>	119
Computational biomechanics of blood flow in cardiovascular diseases <i>T. Yamaguchi, T. Ishikawa, K. Tsubota, Y. Imai, D. Mori and N. Matsuki</i>	130
Microstructural mechanism of skeletal muscle injury and a new constitutive model of skeletal muscle <i>E. Tanaka, D. Ito, S. Yamamoto and K. Mizuno</i>	141
Mechanical characteristics of vascular cells and tissues exposed to deformation, freezing and shock waves: Measurements and theoretical predictions <i>H. Yamada, M. Tamagawa and H. Ishiguro</i>	152
SUBJECT INDEX	165
