Preface

The field on nanotechnology is still in its infancy but continues to progress at a much faster rate than any other field. Many methods to synthesize nano particles, disperse them in a carrying fluid to form a composite and exploit its extraordinary properties is the goal and dream of many researchers engaged in this field. It is not possible to cover every nano particulate matter and its role in materials revolution. The approach adopted here was to focus on carbon nanotubes and nano clays and explore their importance and their role in composites. Hence the chapters presented in this book address processing, rheology, mechanical properties and their interaction with fiber composites. Thus, this book is a collection of nine chapters written by researchers who are at the forefront of their field which address the role of nano particles in composites. The first three chapters focus on the use of Carbon nanotubes in a composite. Chapter 1 is a succinct summary of the state of the art of the carbon nanotubes in composites. Chapter 2 focuses more on the aspects of processing with these nano particles in a suspension. Most research is focused in using these nanotubes sparingly in the composite and exhibit disproportionally better properties. Chapter 3 focuses on how to address higher loadings of these nanotubes and develop nanostructure materials. Chapter 4 explores the interaction between traditional fiber composites and use of nano particles in them in terms of benefits and property enhancement in addition to processing of such materials. Chapter 5 discusses in detail the rheology of suspensions that contain nanofibers and how one can modify existing models to describe their flow behavior. Chapters 6 through 9 address nano clay composites. Chapter 6 is a good overview of the state of the art of the nanoclay usage in various resins and composites. Chapter 7 focuses on the mechanical and physical property characterization of polymer clay nanocomposites.

Chapter 8 discusses further use of nanoclays in thermoplastics and their use in glass fiber composites. Chapter 9 describes methods to prepare nanoclay suspensions with thermosets and the corresponding enhancement in properties. I would like to thank all the authors and reviewers in making this project into reality.

Suresh Advani

*GW Laird Professor of Mechanical Engineering
Associate Director, Center for Composite Materials
University of Delaware*

Contents

Preface	v
Chapter 1	
Carbon Nanotube/Nanofibre Polymer Composites	1
Milo Shaffer and Jan Sandler	
Chapter 2	
Dispersion, Bonding and Orientation of Carbon Nanotubes in Polymer Matrices	61
Suresh Advani and Zhihang Fan	
Chapter 3	
SWNT Buckypaper Nanocomposites: High Nanotube Loading and Tailoring Nanostructures	99
Zhiyong (Richard) Liang, Ben Wang and Chuck Zhang	
Chapter 4	
Processing and Mechanical Properties Characterization of Hybrid Thermoset Polymer Composites with Micro-Fiber and Carbon Nano-Fiber Reinforcements	141
Kuang-Ting Hsiao	
Chapter 5	
Shear Rheology of Nanofiber Suspensions and Nanofiber/Polymer Melt Composites	191
Jianhua Xu, Yingru Wang, Christopher Kagarise, Kurt W. Koelling and Stephen E. Bechtel	

Chapter 6**Recent Advances in Polymer/Layered Silicate Nanocomposites:
An Overview from Science to Technology**

247

Masami Okamoto

Chapter 7**Polymer-Clay Nanocomposites — A Review of Mechanical
and Physical Properties**

307

Zhong-Zhen Yu, Aravind Dasari, Yiu-Wing Mai

Chapter 8**Preparative Methods and Properties of Polypropylene/Layered
Silicate Nanocomposites**

359

Joong-Hee Lee, Prashantha Kalappa, Chang-Eui Hong,
Nam Hoon Kim and Gye-Hyoung**Chapter 9****Clay Nanocomposites Of Polyurethanes And Epoxies:
Preparation Methods And Properties**

419

Sadhan C. Jana
