Preface	ix
Introduction <i>A Nather</i>	xi
Contributors	xiii
SECTION I: BASIC SCIENCE OF BONE	
Chapter 1 Structure of Bone <i>A Nather, HJC Ong and Z Aziz</i>	3
Chapter 2 Fracture Healing <i>A Nather, MCB Feng and Z Aziz</i>	19
Chapter 3 An Introduction to Biomechanics of Bone <i>B P Pereira and A Thambyah</i>	31
SECTION II: AUTOGRAFTS	
Chapter 4 Autogenous Bone Grafting in Orthopaedic Surgery <i>KL Pan and S Ibrahim</i>	59
Chapter 5 Vascularised Pedicular Bone Grafts <i>PB Chacha</i>	71
Chapter 6 Vascularised Autograft: Basic Sciences and Clinical Applications <i>YK Kang and YG Chung</i>	95
Chapter 7 Healing of Large, Non-Vascularised, Cortical Autologus Bone Transplants: An Experimental Study in Adult Cats <i>A Nather</i>	119

SECTION III: ALLOGRAFTS

Chapter 8	Role of Bone Allografts in Orthopaedic Surgery <i>A Nather and Z Aziz</i>	139
Chapter 9	Setting Up a Tissue Bank <i>A Nather and LH Wang</i>	155
Chapter 10	Quality Control Issues in Tissue Banking <i>N Hilmy</i>	173
Chapter 11	Is the Irradiation Dose of 25 kGy Enough to Sterilise Tissue Grafts? <i>N Yusof</i>	189
Chapter 12	Diploma Course Training of Tissue Bank Operators: 7 Years of Experience <i>A Nather, WY Teo and LH Wang</i>	213
Chapter 13	Healing of Large Diaphyseal Deep-Frozen Cortical Allografts <i>A Nather</i>	227
Chapter 14	Bone Allotransplantation: Future Directions <i>SM Kumta, PC Leung and LK Fu</i>	243

SECTION IV: GENOMICS

Chapter 15	The Human Genome <i>S Aziz, BC Lin and A Nather</i>	257
Chapter 16	Genomics in Orthopaedics <i>A Nather, S Aziz and F Kagda</i>	269
Chapter 17	Gene Therapy and New Bone Formation <i>LHC Tsai, SYE Neo and A Nather</i>	277

SECTION V: BONE TISSUE ENGINEERING

Chapter 18	Stem Cell Technology and its Commercial Potential <i>S Rauff and RE Oakley</i>	297
------------	---	-----

Chapter 19	Setting Up a Tissue Engineering Laboratory <i>A Nather, CW Lee and ZQ Tang</i>	313
Chapter 20	Culturing Mesenchymal Stem Cells from Bone Marrow <i>A Nather, S Das De and CW Lee</i>	321
Chapter 21	Bone Marrow Derived Mesenchymal Stem Cells: Potential for Tissue Regeneration <i>J Rosocha, G Vaško, G Varga and D Harvanová</i>	335
Chapter 22	Scaffolds in Bone Tissue Engineering <i>A Nather and S Aziz</i>	357
Chapter 23	Carriers of Mesenchymal Cells <i>A Nather and V David</i>	367

SECTION VI: GROWTH FACTORS

Chapter 24	The Role of Bone Morphogenic Proteins in Bone Incorporation <i>A Nather and A Dutton</i>	379
Chapter 25	Platelet-Rich Plasma in Orthopaedic Surgery: Basic Science and Clinical Applications <i>S Das De, R Manohara and A Nather</i>	387
Chapter 26	Applications of Autogenous Platelet Rich Plasma (PRP) Gel to Enhance Bone Formation <i>C-J Yim</i>	405

SECTION VII: CERAMICS

Chapter 27	The Need for New Materials for Use in Bone in Man <i>PA Revell, E Damien</i>	431
Chapter 28	Role of Ceramics as Bone Graft Substitutes <i>V David, A Nather and KA Khalid</i>	445
Chapter 29	Enhancement of the Bioactivity of Orthopaedic Biomaterials: Role of Growth Factors, Ion Substitution and Implant Architecture <i>E Damien and PA Revell</i>	459

Chapter 30	Fabrication of Granular Hydroxyapatite <i>F Fazan</i>	489
Chapter 31	Role of Corals and Coralline Ceramics in Orthopaedic Surgery <i>V David, A Nather and KA Khalid</i>	501
Chapter 32	Biomedical Use of Corals and Coralline Hydroxyapatite in Hard Tissue Replacement <i>E Damien and PA Revell</i>	513
Chapter 33	Coral as Bone Graft Substitute <i>SA Hamid, AR Samsudin, R Salim and N Omar</i>	533
SECTION VIII: PROSTHESES		
Chapter 34	Rapid Prototyping in Orthopaedics: Principles and Applications <i>J Abdullah and AY Hassan</i>	547
Chapter 35	Custom Mega Prosthesis for Bone Reconstruction in Orthopaedic Surgery <i>MV Natarajan, M Paraskumar and G Rajkumar</i>	563
Index		591

Preface

This book discusses Bone Grafting using autografts from non-vascularised grafts to pedicled ones and free vascularised bone grafts and the various options to bone grafting ie. the use of bone substitutes. The latter ranges from Allografts, Genomics in Orthopaedic Practice with particular reference to Bone Formation, Tissue Engineering including all 3 elements of the triad — Cells, Scaffolds and Signalling Molecules to Ceramics and Prostheses. The section of Ceramics include some results from the ten million ringgit Multi-Centre Research Project in Malaysia namely the fabrication of Malaysian Hydroxyapatite and the development of Malaysian Coral.

This book is useful to clinicians and clinician scientists in the field of Orthopaedics, Plastic and Reconstructive Surgery and Maxillo-Facial Surgery who are commonly presented with the clinical problem of reconstructing large bone defects. It is also useful to research scientists namely tissue engineers and biomedical engineers pursuing the field of research on bone substitutes in the field of allograft transplantation, genomics of bone, bone tissue engineering and the development of new generation bioceramics and new prostheses.

Associate Professor Aziz Nather

Introduction

A Nather

Bone Grafting is one of the commonest operations performed in Orthopaedics. Its indications include non-union, delayed union, packing bone cysts and cavities, elevating depressed articular fractures and reconstruction of large bone defects. Autografting from the iliac crest is the gold standard. However, due to limitations as to amount, size and shape of the graft that could be procured as well as associated donor site morbidity, bone substitutes have become extremely important and useful for Orthopaedic Surgery, Plastic Reconstructive Surgery and Maxillo-Facial Surgery.

Section I first addresses the Basic Science of Bone including the structure of bone and the biomechanics of bone and the repair process that occurs in fracture healing.

Autografts are discussed in detail in Section II including the method of performing autogenous bone grafting and its diverse clinical applications. The ipsilateral pedicled bone graft and also the free vascularised bone graft are covered in detail. The healing of large non-vascularised cortical bone transplants is also described.

Section III deals with a common bone substitute — Allografts. Allografts have served this function very well for the last 5 decades. A useful chapter especially for Universities who have not set up a tissue bank is the chapter on “Setting Up a Tissue Bank” which serves as a useful guide to all wishing to establish a new bone banking facility. Issues of quality control for allografts, value of gamma irradiation to sterilize the bone grafts and the training of tissue bank operators are addressed in detail. Biology

and biomechanics of healing of cortical allografts and the future of bone allotransplantation is also described.

Section IV introduces the field of Genomics and discusses the use of Genomics in Orthopaedic Practice with particular reference to bone formation.

Bone Tissue Engineering is covered in depth in Section V including methodology for culturing Mesenchymal Stem Cells, types of scaffolds used and types of carriers employed for transplantation of cells.

In Section VI the third element of the Tissue Engineering Triad is addressed, namely signalling Molecules or Growth Factors. The role of BMPs and PRP are discussed.

Section VII covers Ceramics. Its scope ranges from the need of new biomaterials to the role of Hydroxyapatite, Coral and Coralline Ceramics as bone substitutes. The fabrication of the Malaysian Hydroxyapatite and the Malaysian Coral recently developed are also described.

Finally, this book on Bone Graft Substitutes would not be complete without discussing one other option, namely Prostheses. Rapid prototyping techniques and the use of Custom MegaProstheses are described in Section VIII.
