Printed in Singapore.

Preface

The main goal in the creation of MPEJ was to have a journal that was distributed as widely as possible in the community and that had as its only criterion for acceptance the quality of the papers. In particular, we did not want that considerations of the number of pages to be published every year entered into decisions of acceptance.

These goals are well served by the free electronic distribution of the papers and the electronic supplements available from:

- <http://www.ma.utexas.edu/mpej>
- <http://mpej.unige.ch/mpej>
- <http://www.maia.ub.es/mpej>

and the about 20 mirrors organized by the European Mathematical Information Service (EMIS) whose main server is:

- <http://www.emis.de>

We think that adding a print version of the papers to the electronic distribution will increase the availability and, given that there is no commitment of pages nor any financial incentive for editors or authors, it will allow MPEJ to keep quality as the sole criterion.

We thank World Scientific and, specially Dr. Sen Hu for the organization of this print version.
