**ADVANCES IN MULTI-PHOTON
PROCESSES AND SPECTROSCOPY VOL. 2**

ADVANCES IN MULTI-PHOTON PROCESSES AND SPECTROSCOPY

Edited by S H Lin

Volume I

Contents: Atomic Multiphoton Processes by *J. H. Eberly and J. Krasinski*; Some Studies on Laser Multiphoton Ionization and Multiphoton Ionization Dissociation of Polyatomic Molecules by *D. A. Gobel, J. J. Yang and M. A. El-Sayed*; Laser-Induced Molecular Dynamics: Rate Processes in the Gas Phase and at Solid Surfaces by *J. T. Lin, M. Hutchinson and T. F. George*; Multiphoton Processes by Visible and UV Lasers by *I. Tanaka and M. Kawasaki*; Applications of Raman Spectroscopy to Structural and Conformational Problems by *J. Laane*; Theory of Laser-Stimulated Surface Processes: Master Equation Approach by *B. Fain, A. R. Ziv, G. S. Wu and S. H. Lin*.

PREFACE

In view of the recent rapid growth in both experimental and theoretical studies of multiphoton processes and multiphoton spectroscopy of atoms, ions and molecules in chemistry, physics, biology, materials sciences, etc., it is desirable to publish an Advanced Series that contains review papers readable not only by active researchers in these areas but also by those who are not experts in the field but intend to enter the field. The present series attempts to serve this purpose. In this series, both theory and experiment are equally emphasized, and each review article is written in a self-contained manner by the experts in the area so that the readers can grasp the knowledge in the area without too much preparation.

The topics covered in this volume are theory of multiphoton processes in molecules (Chapter 1), photochemistry, and photophysics of molecular IR multiphoton excitation (Chapter 2), theoretical treatment of intense field multiphoton processes (Chapter 3), time-resolved resonance Raman spectroscopy (Chapter 4) and application of resonance enhanced multiphoton ionization to radicals (Chapter 5). The editor wishes to thank the authors for their important contributions. It is hoped that the collection of topics in this volume will prove to be useful, valuable and stimulating not only to active researchers but also to other scientists in the areas of biology, chemistry, materials science and physics.

CONTENTS

Preface	v
Chapter 1. Theory of Molecular Multiphoton Transitions	1
<i>Y. Fujimura</i>	
Chapter 2. Photochemistry, Photophysics and Spectroscopy of Molecular Infrared Multiple Photon Excitation	79
<i>J. S. Francisco and J. I. Steinfeld</i>	
Chapter 3. Dynamics and Symmetries in Intense Field Multiphoton Processes: Floquet Theoretical Approaches	175
<i>Shih-I Chu</i>	
Chapter 4. Time-Resolved Resonance Raman Spectroscopy	239
<i>W. Hub, S. Schneider and F. Dörr</i>	
Chapter 5. Detection and Spectroscopy of Methyl and Substituted Methyl Radicals by Resonance Enhanced Multiphoton Ionization	333
<i>M. C. Lin and W. A. Sanders</i>
