Density Matrix Method and Femtosecond Processes

**WORLD SCIENTIFIC LECTURE AND COURSE NOTES
IN CHEMISTRY**

Editor-in-charge: S. H. Lin

- Vol. 1: Lecture Notes on Theoretical Chemistry — Monte Carlo Methods
in *Ab Initio* Quantum Chemistry
W. A. Lester Jr., B. L. Hammond & P. J. Reynolds
- Vol. 2: Quantum Chemistry Aided Design of Organic Polymers —
An Introduction to the Quantum Chemistry of Polymers and
its Applications
J.-M. André, J. Delhalle & J.-L. Brédas
- Vol. 3: Chemical Synthesis in the Laboratory — An Advanced Course
J. M. Burlitch
- Vol. 4: The Physical Chemistry of Biopolymer Solutions —
Application of Physical Techniques to the Study of
Proteins and Nuclei Acids
R. F. Steiner & L. Garone
- Vol. 5: Theoretical Heterogeneous Catalysis
R. A. van Santen
- Vol. 6: Density Matrix Method and Femtosecond Processes
S. H. Lin, R. Alden, R. Islampour, H. Ma & A. A. Villaeys

PREFACE

This lecture notes volume is an outgrowth of lectures given at Shandong University and Nanjing University and the special topics course offered at Arizona State University. It was prepared at a level intended for chemistry and physics graduate students. As is in the nature of lecture notes, no attempt has been made to include all the references.

The authors would like to thank their colleagues, Professors B. Fain, Y. Fujimura, and W. Domcke and Drs. N. Hamer, C. Y. Yeh, H. Kono, A. Boeglin, Ohtsuki and Nomura for various scientific assistance which has made this book possible. They would also like to thank Anna Quan-Leon and Debbie Wolf for typing the manuscript. One of us, S. H. Lin, would like to thank his family, Pearl, Huie and Bing, for their patience and understanding.

S. H. Lin, R. Alden,
R. Islampour, H. Ma, and
A. A. Villaeys

CONTENTS

Preface	v
Chapter 1. Density Matrix Methods	1
1. Introduction	3
2. Density Matrix	7
3. Pauli Master Equation	14
4. Electronic Relaxation and Excitation Energy Transfer	26
5. Vibrational Relaxation	30
6. Derivation of the PME by the Projection Operator Method	39
7. Master Equation for a System Embedded in a Heat Bath	46
8. Absorption Spectroscopy	58
Chapter 2. Pump Probe Experiments	65
1. Introduction	67
2. General Theory	71
3. Generalized Susceptibility	74
4. Adiabatic Approximation	83
5. Band-shape Function $\alpha_{av,av}(\omega)$	87
6. Band-shape Function $\alpha_{av,av'}(\omega)$	100
7. Numerical Demonstrations	106
Chapter 3. Time-resolved Fluorescence Spectroscopy	121
1. Introduction	123

2. General Theory	125
3. Adiabatic Approximation	138
4. Band-shape Function $F_{\beta v, \beta v}(\omega)$	141
5. Band-shape Function $F_{\beta v, \beta v'}(\omega)$	145
6. Numerical Demonstrations	154
 Chapter 4. Time-resolved Resonance Raman Spectroscopy	 169
1. Introduction	171
2. General Theory	173
3. RRS Cross Section	177
4. Applications to Molecular Systems	183
5. Numerical Results	189
 Appendix. Application of the Generalized Transient Susceptibility Approach to Femtosecond Experiments	 201
1. General Consideration	203
2. Pump-probe Absorption Spectroscopy	206
3. Time-resolved Fluorescence	215
