ABOUT THE AUTHORS

MengChu Zhou received the B.S. degree from Nanjing University of Science and Technology, M.S. degree from Beijing Institute of Technology, and Ph. D. from Rensselaer Polytechnic Institute, NY. He is currently an Associate Professor of Electrical and Computer Engineering at NJIT. His interests include computer-integrated manufacturing, Petri nets, intelligent automation, and multi-lifecycle engineering. He co-authored *Petri Net Synthesis for Discrete Event Control of Manufacturing Systems* in 1993, and edited *Petri Nets in Flexible and Agile Automation* in 1995, both by Kluwer Academic, Norwell, MA. He has published more than 120 journal articles, book chapters, and conference proceeding papers. Dr. Zhou served as Program Chairs of the 9th International Conference on CAD/CAM, Robotics, and Factories of the Future, Newark, NJ, 1993, 1997 IEEE International Conference on Emerging Technologies and Factory Automation, Los Angeles, CA, and 1998 IEEE International Conference on Systems, Man and Cybernetics, San Diego, CA. He is an Associate Editor of IEEE Transactions on Robotics and Automation, and editor of International Journal of Intelligent Control and Systems. He was listed in 1994 for the CIM University-LEAD Award by SME and granted the 1996 H. J. Perlis Research Award by NJIT. He is a Senior Member of IEEE and 1998 President-Elect of the Chinese Association for Science and Technology-USA.

Kurapati Venkatesh is a Senior Technical Staff Member in AT&T. Since 1988, he has been applying Petri nets to investigate a variety of problems in flexible automation, object-oriented software development, communication networks, enterprise modeling, business process reengineering, and neural networks. He has published more than 30 papers in journals and conferences including, International Journal of Production Research, Journal of Manufacturing Systems, IEEE Transactions on Industrial Electronics, Computers and Industrial Engineering, International Journal of Operations and Production Management, and International Journal of Material Processing and Technology. He holds a Doctorate in Mechanical Engineering (1995, New Jersey Institute of Technology) with focus on Petri nets and its applications for modeling, simulation, and control of FMSs using object-oriented concepts. He has an M.S. in Manufacturing Systems Engineering (1992, FAU, Boca Raton); an M.S. (1990, Indian Institute of Technology, Madras) and a B.S. (1988, Sree Venkateswara University, India) in Mechanical Engineering. He is a member of SME, ASME and IEEE.

SERIES IN INTELLIGENT CONTROL AND INTELLIGENT AUTOMATION

Editor-in-Charge: Fei-Yue Wang
(*University of Arizona*)

- Vol. 1: Reliable Plan Selection by Intelligent Machines
(*J E McInroy, J C Musto, and G N Saridis*)
- Vol. 2: Design of Intelligent Control Systems Based on Hierarchical Stochastic Automata (*P Lima and G N Saridis*)
- Vol. 3: Intelligent Task Planning Using Fuzzy Petri Nets
(*T Cao and A C Sanderson*)
- Vol. 6: Modeling, Simulation, and Control of Flexible Manufacturing Systems: A Petri Net Approach (*M Zhou and K Venkatesh*)
- Vol. 7: Intelligent Control: Principles, Techniques, and Applications (*Z-X Cai*)
- Vol. 10: Autonomous Rock Excavation: Intelligent Control Techniques and Experimentation (*X Shi, P J A Lever and F Y Wang*)

Forthcoming volumes:

- Vol. 4: Advanced Studies in Flexible Robotic Manipulators: Modeling, Design, Control, and Applications (*F Y Wang*)
- Vol. 5: Computational Foundations for Intelligent Systems (*S J Yakowitz*)
- Vol. 8: Advanced Topics in Computer Vision and Pattern Recognition
(*E Sung, D Mital, E K Teoh, H Wang, and Z Li*)
- Vol. 9: Petri Nets for Supervisory Control of Discrete Event Systems: A Structural Approach (*A Giua and F DiCesare*)

PREFACE

Whether it is a manufacturing based company or a service based company, the key to stay at the apex of global competition is to meet the dynamically changing needs of customers. Flexible Manufacturing Systems (FMS) combine both the sophisticated manufacturing equipment and the advanced computer and information technology to impart flexibility to the manufacturing operations, thereby effectively meeting the changing needs of customers.

FMS consist of several types of machines, computers, robots, and automated guided vehicles and are designed to produce a great variety of products. While FMS give a cutting-edge advantage to a manufacturing company through their flexibility, they pose complex problems for their planning, designing, scheduling, controlling, and monitoring. This is primarily due to the inherent nature of FMS that are asynchronous concurrent systems. Modeling tools often help to address the above stated problems in FMS. There is a great demand for integrated tools that address the multifaceted problems in FMS. Unlike the several available tools such as mathematical programming, queuing networks, ladder logic diagrams, commercial simulation packages, Petri nets offer such an integrated solution to address effectively many issues in design and operation of FMS.

In order to address these problems, this book focuses on both the theory and several applications of Petri nets in modeling, analysis, simulation, scheduling, and control of FMS. It not only contributes to the theory of Petri nets by introducing new types of Petri nets such as Augmented Timed Petri Nets and Real-Time Petri Nets but also applies them to address issues related to breakdown handling and real-time discrete event control. It illustrates the use of Petri nets to compare the performance of push and pull systems and to develop object-oriented control software. Basic comparative studies that compare Real-Time Petri Nets and ladder logic diagrams for discrete event control are also presented. Roughly speaking, this book draws a half of material from the second author's doctoral dissertation, and another half from the lecture materials of a graduate level course entitled "Discrete Event Dynamic Systems" at New Jersey Institute of Technology (NJIT) by the first author and some recent research results obtained by his research group at NJIT.

Organization

This book is organized as follows. Chapter 1 discusses the background, motivation, and purpose of this book. Chapter 2 presents an overview of FMS and concludes by emphasizing the importance of integrated modeling tools. It is based on the paper entitled "Flexible Manufacturing Systems: An Overview" in *International Journal of Operations and Production Management*, Vol. 13, No. 4, pp. 26-49, 1994 by Kaighobadi and Venkatesh. Chapter 3 presents Petri nets as an integrated tool and methodology in FMS design. A significant portion of this chapter is based on the article entitled "Petri nets: tool and technology" by Zhou and Zurawski in the March 1994 issue of *IEEE IES Newsletter*, the Newsletter of IEEE Industrial Electronic Society. Some representative papers and reports are surveyed with the focus on the applications of Petri nets in modeling, analysis, performance evaluation, simulation, control, planning, and scheduling of FMS.

The fundamentals of Petri nets are introduced in Chapter 4. Several simple yet interesting manufacturing and assembly examples are used to illustrate the concepts. Chapter 5 presents several important classes of Petri nets in modeling automated manufacturing systems and their application scope. The modeling and synthesis procedures are discussed and many FMS examples are given. Chapter 6 focuses on the analytical performance modeling and evaluation of FMS. The materials presented in Chapters 4-6 are based on several papers including

- ♦ "Modeling, Analysis, Simulation, Scheduling, and Control of Semiconductor Manufacturing Systems: A Petri Net Approach" by Zhou and Jeng, to appear in *IEEE Transactions on Semiconductor Manufacturing*, August 1998.
- ♦ "Petri Nets and Industrial Application: A Tutorial" by Zurawski and Zhou in *IEEE Transactions on Industrial Electronics*, 41(6), pp. 567-583, December 1994; and
- ♦ "Petri Net Synthesis and Analysis of A Flexible Manufacturing Cell" by Zhou, McDermott and Patel in *IEEE Transactions on Systems, Man and Cybernetics*, 23(2), pp. 523-531, March/April 1993.

As the model complexity increases, the use of analytical techniques for performance analysis becomes harder and impossible for many cases. Discrete event simulation becomes an indispensable alternative for the performance analysis. Chapter 7 presents the basic principles of Petri net simulation and explores the use of Petri net simulation tools. It is based on the paper by Venkatesh, Chetty, and Raju, "Simulating Flexible Automated Forming and Assembly Systems," *Journal of Material Processing and Technology*, Vol. 24, pp. 453-462, December 1990.

Chapter 8 demonstrates Petri nets as a powerful tool to investigate the problem often encountered in manufacturing systems management, namely comparing

the performance of push and pull systems. It is based on the paper by Venkatesh, Zhou, Kaighobadi, and Caudill, "A Petri Net Approach to Investigating the Performance of Push and Pull Paradigms in Flexible Factory Automated Systems using Petri Nets," *International Journal of Production Research*, Vol. 34, No. 3, pp. 595-620, 1996. Chapter 9 introduces a new type of Petri nets called Augmented Timed Petri Nets for breakdown handling and presents a case study on their use in modeling and analysis of a multi-robot assembly system. It is based on the paper "Augmented Timed Petri Nets for Modeling of Robotic Systems with Breakdowns," *Journal of Manufacturing Systems*, Vol. 13, No. 4, pp. 289-301, 1994 by Venkatesh, Kaighobadi, Zhou, and Caudill.

Another class of Petri nets called Real-Time Petri Nets is introduced in Chapter 10 along with their unique features and how they are different from the various existing classes of Petri nets for real-time control. Chapter 11 presents a case study comparing Real-Time Petri Nets and ladder logic diagrams. It also develops some comparison criteria and analytical formulas to quantify the complexity of models designed by Real-Time Petri Nets and ladder logic diagrams. These two chapters are based on the papers by Venkatesh, Zhou, and Caudill, "Comparing Ladder Logic Diagrams and Petri Nets for the Design of Sequence Controllers Through a Discrete Manufacturing System," *IEEE Transactions on Industrial Electronics*, Vol. 41, No. 6, pp. 611-619, 1994, and "Evaluating the complexity of Petri nets and ladder logic diagrams for sequence controllers design in flexible automation," in *Proc. of Seiken/IEEE Workshop on Emerging Technologies and Factory Automation*, pp. 428-435, Tokyo, Japan, November 1994.

Chapter 12 introduces Petri Nets in the design of object-oriented control software. By combining the existing modeling methods such as Object Modeling Technique Diagrams and Petri Nets, it presents a case study in which Petri Nets are formally applied for the dynamic modeling in the object-oriented software development. The material is based on the paper entitled "Object-oriented design of FMS Control Software based on Object Modeling Technique Diagrams and Petri nets" by Venkatesh and Zhou in *Journal of Manufacturing Systems*, Vol. 17, No. 2, pp. 118-136, 1998. Chapter 13 explores the application of Petri Nets in scheduling of FMS by combining them with heuristic-based search approaches. This chapter is based on several sources including

- ◆ The doctoral dissertation research performed by Huanxin H. Xiong under the first author's supervision,
- ◆ The paper entitled "Hybrid Heuristic Search for Petri Net Scheduling of an FMS" by Xiong, Zhou and Caudill, in *Proceedings of 1996 IEEE International Conference on Robotics and Automation*, Minneapolis, MN, pp. 2793-2797, April 1996, and

- ♦ The paper entitled “Scheduling of Semiconductor Test Facility via Petri Nets and Hybrid Heuristic Search” by Xiong and Zhou, to appear in *IEEE Transactions on Semiconductor Manufacturing*, August 1998.

Finally, Chapter 14 presents the future research and development of Petri Nets in flexible automation.

Acknowledgments

Many people have helped us in completing this book. Especially, we would like to thank Dr. Fei-Yue Wang, the editor of this series for his help, encouragement and support. We would like to thank Professors Reggie J. Caudill, Xiuli Chao, Ernest Geskin, and Dr. Anthony D. Robbi who served as the doctoral committee of the dissertation of the second author of this book. They are also very helpful colleagues of the first author. In particular, Professor Caudill has been our collaborator for many years and served as a co-advisor of the second author's dissertation. We would also like to acknowledge the assistance provided by Dr. H. H. Xiong at Lucent Technologies, Professors N. Ansari, R. Haddad, R. Kane, and G. Thomas at NJIT. The first author would like to thank his wife, Fang Chen, his parents and parents-in-law for their support and love. The second author would like to express his gratitude to all of his family members including his sisters, brothers-in-law, father-in-law, mother-in-law and especially thanks his mother, Sree Lakshmi and his wife, Amita to support the long weekends of time spent in the lab. He would also acknowledge the support of NJIT, Florida Atlantic University, Indian Institute of Technology at Madras where the entire work reported in this book was performed. We are grateful for the support of World Scientific through their professional editorial staff members.

The preparation of this book has been financially supported by the New Jersey State Commission on Science and Technology through the Center for Manufacturing Systems at NJIT and the National Science Foundation under Grant No. DMI-9410386.

CONTENTS

Preface.....	vii
Chapter 1. Introduction	1
1.1. Background, Motivation and Objectives	1
1.2. Historical Perspective on Manufacturing Systems	2
1.3. Historical Perspective on Petri Nets	5
1.4. A Robotic Cell and Petri Net Model	7
1.5. Summary.....	14
Chapter 2. Flexible Manufacturing Systems: An Overview	15
2.1. Introduction	15
2.2. Definitions of FMS.....	16
2.3. Impetus for Change	18
2.4. Installation, Implementation, and Integration of FMSs.....	20
2.5. Applications of FMSs.....	24
2.6. Problems in Installation and Implementation of FMSs	25
2.6.1. Managerial Problems	26
2.6.2. Technical Problems.....	27
2.7. Summary.....	36
Chapter 3. Petri Nets as Integrated Tool and Methodology in FMS	
Design	39
3.1. Introduction	39
3.1.1. Brief and Informal Introduction to Petri Nets	40
3.1.2. Advantages of Petri Nets	41
3.1.3. General Procedure for Applying Petri Nets in FMS Design.....	42
3.1.4. Successful Industrial Applications.....	43
3.2. Modeling and Analysis.....	44

3.3. Performance Analysis and Evaluation.....	46
3.4. Discrete-Event Simulation.....	49
3.5. Discrete-Event Control	50
3.6. Planning and Scheduling	55
3.7. Summary.....	58
Chapter 4. Fundamentals of Petri Nets.....	59
4.1. Conditions, Events, and State Machines	59
4.2. Formal Definition of Petri Nets	64
4.2.1. Definition of Petri Nets.....	64
4.2.2. Execution Rules of Petri Nets	66
4.3. Properties of Petri Nets and Their Implications	69
4.3.1. Reachability	70
4.3.2. Boundedness and Safeness	70
4.3.3. Conservativeness.....	71
4.3.4. Liveness	71
4.3.5. Reversibility and Home State	72
4.3.6. Other Structural Properties	73
4.3.7. Examples.....	73
4.3.8. Implications in Flexible Manufacturing.....	74
4.4. Reachability Analysis Method	75
4.5. Invariant Analysis Method	80
4.6. Reduction Methods.....	83
4.7. Other Analysis Methods	89
4.8. Summary.....	90
Chapter 5. Modeling FMS with Petri Nets	91
5.1. State Machine Petri Nets	92
5.2. Marked Graphs	95
5.3. Free-Choice and Asymmetric Choice Petri Nets.....	99
5.4. Acyclic Petri Nets and Assembly Petri nets	105
5.5. Production-Process Nets and Augmented Marked Graphs	109

5.6. General Modeling Method 118

5.7. Systematic Modeling Methods..... 125

 5.7.1. Bottom-up Methods 125

 5.7.2. Top-Down Methods 131

 5.7.3. Hybrid Methods 132

5.8. Top-down Modeling of an NJIT's FMS Cell: A Case Study..... 133

 5.8.1. Description of A Flexible Manufacturing Cell 133

 5.8.2. Top-Down Design Process: First Level Net and Modules.. 136

 5.8.3. Final Petri Net Model..... 143

5.9. Summary..... 145

Chapter 6. FMS Performance Analysis 147

 6.1. Deterministic Timed Petri Nets 147

 6.2. Analysis of an FMS Cell: A Case Study 153

 6.3. Stochastic Petri Nets..... 156

 6.3.1. Exponential Distribution..... 156

 6.3.2. Definition and Solution of Stochastic Petri Nets 157

 6.3.3. Generalized Stochastic Petri Nets 165

 6.3.4. Other Extensions to Stochastic Petri Nets..... 166

 6.4. Performance Analysis of a Flexible Workstation..... 166

 6.4.1. Overview of SPNP 167

 6.4.2. Performance Evaluation of a Flexible Workstation..... 169

 6.5. Summary..... 174

Chapter 7. Petri Net Simulation and Tools..... 177

 7.1. Introduction. 177

 7.2. Discrete Event Simulation..... 178

 7.2.1. Discrete Event Simulation Procedure 178

 7.2.2. Simulation Models, Schemes and Tools 182

 7.2.3. Simulation Schemes and Tools 185

 7.3. Timed Petri Nets and Token Game Simulation..... 187

 7.4. Description of the Software Package to Simulate Petri Nets 189

7.5. Other CASE Tools to Simulate and Analyze PNs..... 192

7.6. Summary..... 194

**Chapter 8. Performance Evaluation of Push and Pull Paradigms
in Flexible Automation 195**

8.1. Introduction 195

8.2. Push and Pull and their PN Modeling 197

8.3. Application Illustration..... 200

 8.3.1. System Configuration and Assumptions..... 200

 8.3.2. Statement of the Problem..... 202

 8.3.3. PNM Formulation and Analysis 202

8.4. Procedure for PN Modeling and Analysis and Simulation
 results 212

 8.4.1. FMS with the Pull Paradigm 213

 8.4.2. FAS with the Pull Paradigm..... 215

 8.4.3. FMS with the Push Paradigm..... 216

 8.4.4. FAS with the Push Paradigm 217

 8.4.5. Simulation Results 217

8.5. Summary..... 220

**Chapter 9. Augmented-Timed Petri Nets for Modeling Breakdown
Handling 223**

9.1. Introduction 223

9.2. Augmented Timed Petri Nets 225

9.3. Application Illustration: A Flexible Assembly System 230

 9.3.1. System Description 230

 9.3.2. ATPN Modeling of the System..... 232

 9.3.3. ATPN Model for Designing the Optimum Number of
 Assembly Fixtures 234

 9.3.4. Simulation and Analysis of the ATPN Model 236

9.4. Summary..... 238

Chapter 10. Real-Time Petri Nets for Discrete Event Control	241
10.1. Introduction	241
10.2. Real-time Petri Nets	241
10.3. Real-time PNs and Other PN Extensions for Control	244
10.4. Example: An Automatic Assembly System	248
10.5. A Case Study: An Electro-Pneumatic System.....	251
10.6. Software Description to Execute Real-time Petri Nets	255
10.7. Summary.....	257
 Chapter 11. Comparison of Real-Time Petri Nets and Ladder Logic Diagrams	 259
11.1. Introduction	259
11.2. Comparison Criteria for Control Logic Design by PNs and LLDs	261
11.3. Comparison Through an Electro-Pneumatic System.....	264
11.3.1. Sequence Controller Design	264
11.3.2. Control for Other Sequences.....	269
11.3.3. Discussions	272
11.4. Analytical Formulas to Evaluate the Complexity of PNs and LLDs	278
11.4.1. Logical AND, Logical OR, and Sequential Modeling.....	279
11.4.2. Timed Logical AND, Timed Logical OR, and Timed Sequential Models	282
11.4.3. Other Formulas for Estimating Basic Elements in PN and LLD	284
11.5. Methodology to Use the Analytical Formulas.....	289
11.6. Illustration of the Methodology Through Examples	292
11.6.1. An Automatic Assembly System	292
11.6.2. An Electro-Pneumatic System Without Sustained Signals	293
11.6.3. An Electro-Pneumatic System With Sustained Signals	296
11.7. Summary.....	300

Chapter 12. An Object-Oriented Design Methodology for Development of FMS Control Software	303
12.1. Introduction	303
12.1.1. Background	304
12.1.2. Literature Review and Motivation	305
12.2. Methodology for FMS Control Software Development	307
12.2.1. Methodology	307
12.2.2. Fundamentals of OOD	309
12.2.3. Object Modeling Technique Diagram as a Static Modeling Tool	311
12.2.4. Petri Nets as a Dynamic Modeling Tool	314
12.3. Illustration of the Methodology with an FMS	315
12.3.1. OMT Diagram and PNM of the FMS	317
12.3.2. Complete Structure of Objects with Their Static and Dynamic Relations	324
12.3.3. Reusability, Extendibility, and Modifiability of the Design	326
12.4. Summary	328
Chapter 13. Scheduling Using Petri Nets	333
13.1. Introduction	333
13.2. A Brief Review	334
13.3. Petri Net Modeling for Scheduling	337
13.3.1. Petri Net Model with Traditional Assumptions	339
13.3.2. Petri Net Model with Finite Buffer Size	342
13.3.3. Petri Net Model with Multiple Lot Size	342
13.3.4. Petri Net Model with Material Handling Considered	344
13.3.5. Petri Net Model for Flexible Routes	345
13.4. Best-First, Backtracking, and Hybrid Search Algorithms	346
13.4.1. Best First Search and Backtracking Search	346
13.4.2. Hybrid Heuristic Search Algorithms	349
13.5. Scheduling an Automated Manufacturing System	351

13.6. Modeling and Scheduling of a Semiconductor Test Facility 355

13.7. Summary..... 363

Chapter 14. Petri Nets and Future Research 365

14.1. CASE Tool Environment 365

14.2. Scheduling Large Production Systems 369
