Preface

Due to climate change, it has become common knowledge that fluctuations of annual precipitation and precipitation intensity have been larger especially since the 1970s. The 4th Synthesis Report by the Intergovernmental Panel on Climate Change (IPCC) says that global warming is unequivocal and that enduring snow cover and glaciers have been receding, thus torrential rain and serious drought occur more frequently. These phenomena associated with increasing water demand due to an increase in population and rise in living standards and increasing degradation of aquatic environment will give human beings urgent tasks toward maintaining a future sustainable society.

Integrated River Basin Management (IRBM) was advocated at least four decades ago. Although we understand the concept of IRBM, research work has been done only on water resources allocation and pollution control of receiving water bodies. IRBM has to include policies, social systems as well as cultural background, such that reduction in water resources allocation to the agricultural sector needs social countermeasures for excess workforce and import of food.

This book contains in part, research results on the five-year project on “Efficient and sustainable water use in the Yellow River, China”. The important topics on water and sediments in the Yellow River are presented in six major sections: Profile of the Yellow River Basin, Water Resources and Use, Water Quality and River Ecology, Sediment Yield and Transport in the Middle Yellow River Basin, Modeling and Simulation on Water in the Yellow River, and Projection of Water Supply and Demand with Economy and Food Supply in the Yellow River Basin. All chapters are written by leading experts in our project team, in which the total researchers number 102. Chapter 2 provides the background information necessary to understand the characteristics of the Yellow River. Chapter 3 provides background information on water-use in the river. Direct observation results on water quality in tributaries near Xi’an are presented in Chap. 4. Chapter 5 explains that sediment yield and transport is of importance in the Yellow River where 1.6 billion tons of sediments are annually transported in the Bohai Sea. Chapter 6 provides a hydrological model with high precision and some simulation results.

The last chapter, Chap. 7, provides some estimation results on water-use based on several economic scenarios.

We hope that you will find this book to be full of the latest information obtained by researchers on the Yellow River and that you will be able to grasp the environmental problems on water which China is facing.

We gratefully acknowledge the establishment of a basic research promotion program in CREST (Core Research of Evolutional Science and Technology), which is related to water resources and aquatic environment, and the financial support by Japan Science and Technology Agency. I, as a team leader, extend sincere appreciation to all the researchers who had been working for five years from 2002 to 2007. Finally, we thank all research associates and graduate and undergraduate students for being a source of inspiration and encouragement to me.

Contents

<i>Preface</i>	v
<i>List of Contributors</i>	xi
<i>List of Images</i>	xiii
1. Introduction	1
<i>Tetsuya Kusuda</i>	
2. Profile of the Yellow River Basin	5
<i>Dawen Yang and Hiroshi Ishidaira</i>	
2.1. Characteristics of the Nature	5
2.1.1. Morphology	5
2.1.2. Geology	7
2.1.3. Climate	8
2.2. Human Activities	10
2.2.1. Population distribution	10
2.2.2. Land use	12
2.2.3. Urban and rural lives	14
2.2.4. Agriculture	16
2.2.5. Industry	16
2.2.6. Production and economics	17
2.3. Socio-Economic States	17
2.3.1. Strategic situation of the Yellow River in history	17
2.3.2. Socio-economic conditions in the basin	19
2.3.3. Policy of development in the basin	20
2.3.4. Administration in the basin	21
2.3.5. Social problems on water in the basin	21
References	23

3. Water Resources and Use 25

Dawen Yang, Kyoichi Otsuki, Tetsuo Kobayashi, Daisuke Yasutake, Hiroyuki Cho, Masaharu Kitano, Makito Mori, Tugihiro Watanabe, Kuniyoshi Takeuchi, Hiroshi Ishidaira and Changrong Yan

3.1. Water Resources Availability 25

3.1.1. Precipitation/snow melting 26

3.1.2. Potential evaporation 29

3.1.3. Runoff and river flow 30

3.1.4. Water storage 35

3.1.5. Groundwater resources 37

3.2. Water-Use 39

3.2.1. Forest 39

3.2.2. Irrigation 46

3.2.3. Industrial use 63

3.2.4. Consumption of water in urban areas 66

References 69

4. Water Quality and River Ecology 73

Tetsuya Kusuda and Osamu Higashi

4.1. Water Quality in the Yellow River Basin 73

4.2. Water Quality in the Wei River Basin 73

4.2.1. Sources of pollutants 77

4.2.2. Pollutant unit loads and loading rates 79

4.3. Water Quality in the Wei River 84

4.3.1. Observational results 84

4.4. Simulation with an Integrated Model on Water Quality and Quantity 87

4.4.1. Integrated model of water quantity and quality 87

4.4.2. Computational results 94

4.4.3. Toward future 96

4.5. River Environment in Xi'an 97

4.5.1. Urban areas 98

4.5.2. Effects of reservoirs 102

References 103

5. Sediment Yield and Transport in the Middle Yellow River Basin	105
<i>Haruyuki Hashimoto, Hiroki Takaoka, Takahito Ueno and Byungdug Jun</i>	
5.1. Sediment Yield	105
5.2. Fluvial Geomorphology	107
5.2.1. Analytical framework	107
5.2.2. Analysis of geographic information and satellite images	107
5.2.3. Comparison of the eight tributaries in the middle reach of the Yellow River	108
5.3. Field Measurements of Flood Flows	109
5.3.1. Rainfall–runoff relationships	109
5.3.2. Sediment particle size in flood flows and on riverbeds .	114
5.3.3. Relationship between discharge and sediment transport rate	115
5.3.4. Flow resistance	117
5.4. Formula for Flow Resistance and Sediment Transport	118
5.5. Comparison among Theoretically Calculated, Experimental and Observed Results	120
5.6. Analysis of Flood and Sediment Runoff	122
5.6.1. Rainfall–runoff analysis	122
5.6.2. Riverbed variation analysis	122
References	124
6. Modeling and Simulation on Water in the Yellow River	127
<i>Dawen Yang</i>	
6.1. Hydrological Model and Simulation	127
6.1.1. Introduction	127
6.1.2. Data	128
6.1.3. Description of the hydrological model	131
6.1.4. Model calibration and validation	136
6.2. Analysis of Water Resources in the Last Half Century	138
6.2.1. Spatial and seasonal distributions of water resources for a long-term mean	138
6.2.2. Decadal variation of water resources	142
6.2.3. Inter-annual variability of water resources	144
6.2.4. Reason for the drying-up in the main river along the lower reach over the last 30 years	145
References	148

7. Projection of Water Supply and Demand with Economy and Food Supply in the Yellow River Basin	151
<i>Hidefumi Imura, Hiroaki Shirakawa and Akio Onishi</i>	
7.1. Analysis of Current Water-Use Using the Water Resource Supply-Demand Model	153
7.1.1. Overview of the model	153
7.1.2. Structural changes in water resource supply and demand (1997–2000)	155
7.2. Impacts of Economic Growth and Urbanization on Water Resource Supply-Demand Balance	159
7.2.1. Regional economic growth scenarios	159
7.2.2. Water supply-demand gaps in the Yellow River basin . .	162
7.2.3. Analysis by watershed	163
7.3. Impacts of Changes in Food Demand on Water Resources . . .	169
7.4. Toward the Future	170
References	172
Index	173
