COMMENT ON THE CONSTRAINT FOR ANOMALOUS
JACOBI IDENTITY

[MOD. PHYS. LETT. A, Vol. 1, No. 2 (1986) 103–110]

BO-YU HUO and YAO-ZHONG ZHANG

Equation (18) on page 107 contains some errors. It should read

$$\begin{aligned}
 & [G^a(x), Q^{bcd}(q; y, z, u)] - [G^b(y), Q^{cda}(q; z, u, x)] + [G^c(z), Q^{dab}(q; u, x, y)] \\
 & - [G^d(u), Q^{abc}(q; x, y, z)] - f^{abe} Q^{ecd}(q; x, z, u) \delta(x-y) + f^{bce} Q^{eda}(q; y, u, x) \\
 & \times \delta(y-z) - f^{cde} Q^{eab}(q; u, x, y) \delta(z-u) + f^{dae} Q^{ebc}(q; u, y, z) \delta(u-x) \\
 & - f^{ace} Q^{edb}(q; x, u, y) \delta(x-z) + f^{bde} Q^{eac}(q; y, x, z) \delta(y-u) = 0.
 \end{aligned}$$

Correspondingly, Eq. (19) should read

$$\begin{aligned}
 & [G^a(x), [G^b(y), [G^c(z), G^d(u)]]] + (\text{perm.}) \\
 & = f^{abe} \delta(x-y) \{ [G^e(x), [G^c(z), G^d(u)]] + (\text{perm.}) \} \\
 & - f^{bce} \delta(y-z) \{ [G^e(y), [G^d(u), G^a(x)]] + (\text{perm.}) \} \\
 & + f^{cde} \delta(z-u) \{ [G^e(u), [G^a(x), G^b(y)]] + (\text{perm.}) \} \\
 & - f^{dae} \delta(u-x) \{ [G^e(u), [G^b(y), G^c(z)]] + (\text{perm.}) \} \\
 & + f^{ace} \delta(x-z) \{ [G^a(x), [G^d(u), G^b(y)]] + (\text{perm.}) \} \\
 & - f^{bde} \delta(y-u) \{ [G^e(y), [G^a(x), G^c(z)]] + (\text{perm.}) \}
 \end{aligned}$$
