In the fourth paragraph of page 4802, the two instances of “ ω_p ” should read “ ω_{p_0} ”.
 On page 4810, Eq. (87) should read

$$\nabla \mathcal{O} = \delta \mathcal{O} + [\mathfrak{N}, \mathcal{O}], \quad \bar{\nabla} \mathcal{O} = \bar{\delta} \mathcal{O} + [\bar{\mathfrak{N}}, \mathcal{O}], \quad (87)$$

and Eq. (90) should read

$$\delta[\mathcal{O}_a, \mathcal{O}_b] = [\delta \mathcal{O}_a, \mathcal{O}_b] + (-)^{d_a} [\mathcal{O}_a, \delta \mathcal{O}_b]. \quad (90)$$

On page 4811, Eq. (97) should read

$$\bar{\delta} \mathfrak{N} + \delta \bar{\mathfrak{N}} = 0. \quad (97)$$

On page 4814, to be accurate Eq. (A.2) should read

$$1_\omega \cdot s(S) = (\epsilon^{(i)})^{-1} I_s(S), \quad 1_k \cdot x(X) = (\epsilon^{(i)})^{-1} I_x(X). \quad (\text{A.2})$$

for the time frequencies ω and the wave numbers k in the wave function.
