The following items are typographical errors in the published article.

Second paragraph on Page 2:

The term Σ^{++} should be delta Δ^{++} and the sentence should read:

“How can a baryon like Δ^{++} exist as an S -wave spin-flavor symmetric state $|u\uparrow u\uparrow u\uparrow\rangle$ if quarks are spin- $\frac{1}{2}$ fermions?”

Last line on Page 4:

The phrase “two years later” should be “four years later” and the sentence should read:

“The choice between canonical and anomalous dimensions would be cleared up by asymptotic freedom^{32,33} four years later.”

Second paragraph on Page 9:

The term ∂_y^μ should be ∂_y^ν and the sentence should read:

“In Eq. (17), a *single* derivative ∂_y^ν produces a *product of two delta functions*, so it is clear that θ -functions in time *cannot* be used to construct “ T ”.”

Equation (40) on Page 12:

The term $J_5^\mu(0)$ should be deleted and the Equation should read:

$$G_{\alpha\beta\gamma}(x, y) \xrightarrow{x \ll y} \{K \epsilon_{\alpha\beta\lambda\mu} x^\lambda / (3\pi^2 u^2)\} R'(\delta_\gamma^\mu y^2 - 2y^\mu y_\gamma) I / (\pi v)^4. \quad (40)$$
