ORTHOGONAL SHORTEST ROUTE QUERIES AMONG AXES PARALLEL RECTANGULAR OBSTACLES

HOSSAM ELGINDY and PINAKI MITRA

International Journal of Computational Geometry and Applications
Vol. 4, No. 1 (1994) 3-24

On p. 5 one sentence is missing between “ query in $O(\log n)$ time” (line 5 from top) and “The re-” (same line):

This is an improvement by a $O(\log n)$ factor over the known cost (processors $\times$ time) of preprocessing, previously achieved by Atallah et al.⁸

On p. 8 three lines are missing at the bottom. They are as follows:

- (b) For each element in $(u, v) \in E$ that corresponds to a vertical edge, we split each vertex incident on E into 2 vertices ($u \rightarrow u_1$ and u_2 and $v \rightarrow v_1$ and v_2). The vertex with lower x -coordinate than v and adjacent to it is joined to v_1 ,
